1. The first group of variables includes the demographic characteristics of the respondents, such as age, gender, and education level. These variables are used to control for potential confounding factors that may influence the dependent variable.

2. The second group of variables represents the independent variables, which are the factors being tested for their effect on the dependent variable. These variables are selected based on theoretical considerations and previous research findings.

3. The third group of variables consists of control variables, which are included to account for other factors that may affect the outcome but are not the primary focus of the study. These variables help to isolate the effect of the independent variables.

4. The final group of variables includes the dependent variable, which is the outcome being measured in the study. This variable is the primary focus of the research and is used to assess the impact of the independent variables.
